Trainer: Abhijith V G – AWS, eCommerce, Mobile & DevOps Architect

"Jack of all trades, master of none."

Never attempt to master all the tools in one go! Take your time, understand the essentials of DevOps and learn as you become more and more comfortable as DevOps is huge in terms of the number of tools available.

In this class we will cover the essential tools that you need to begin the DevOps journey well! Please take your time to experiment master these set of tools, they will be of immense help!

1. Define DevOps

DevOps (a clipped compound of "development" and "operations") is a software development and delivery process that emphasizes communication and collaboration between product management, software development, and operations professionals.

- *Wikipedia*

2. What is DevOps?

DevOps is a series of processes and tools, as well as a cultural practice within a company, that encourages collaboration between development (developers, QA, project management, and other associated teams) and operations (systems administrators, systems architects, security, and related). It is often characterized by its use of fast release cycles, common tools, and overall "DevOps" concepts.

What is DevOps?

3. SDLC Models

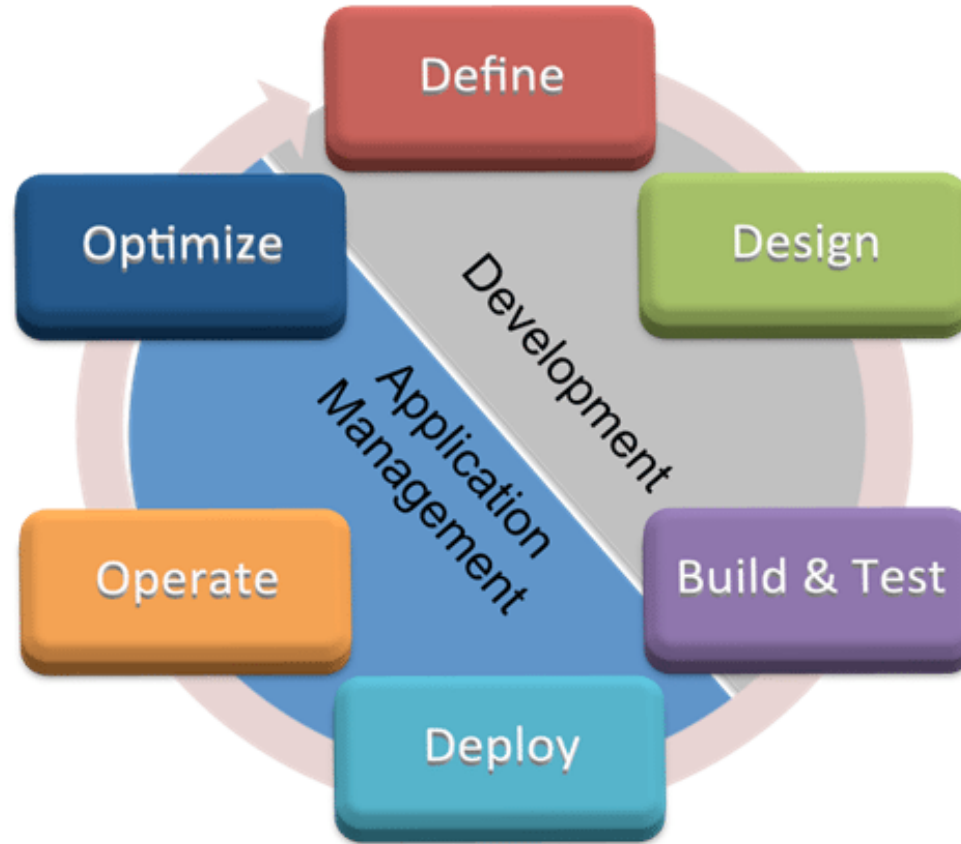

A wise man once said that if you fail to plan, you plan to fail. The Systems Development Life Cycle (SDLC) gives structure to the madness of getting from the beginning to the end of your project without forgetting a step. It's a type of project plan. There are a number of different SDLC methodologies used today to guide your way through projects. We will some of them.

Principles of Lean Thinking

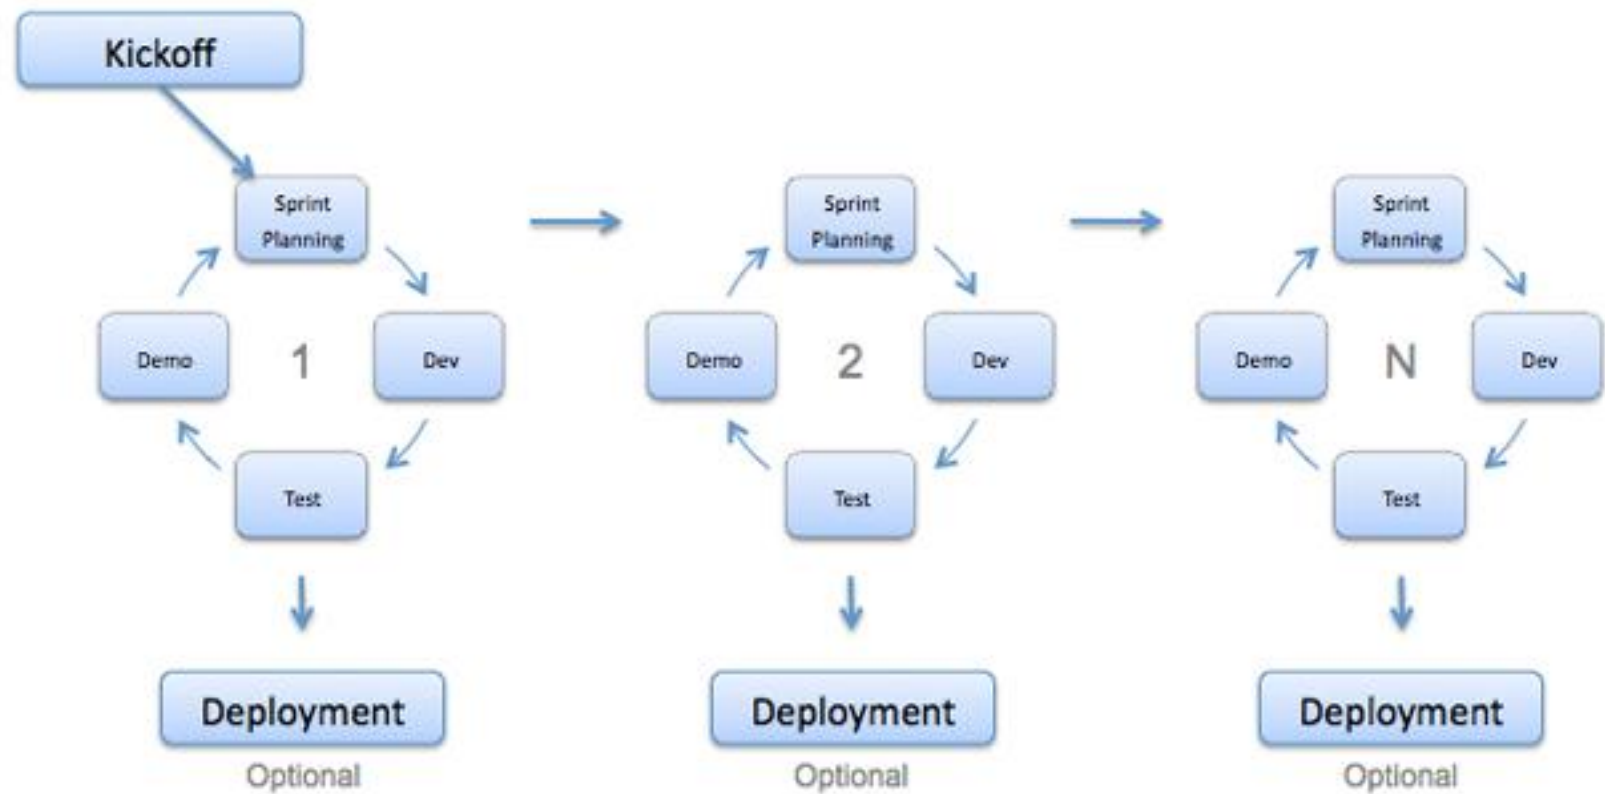

1. Eliminate Waste
2. Increase Feedback
3. Delay Commitment
4. Deliver Fast
5. Build Integrity In
6. Empower the Team
7. See the Whole

SDLC Models – ITIL Model

SDLC Models – Agile Model

4. Why DevOps?

Technical Benefits

- Continuous software delivery
- Less complexity to manage
- Faster resolution of problems

Cultural Benefits

- Happier, more productive teams
- Higher employee engagement
- Greater professional development opportunities

Business Benefits

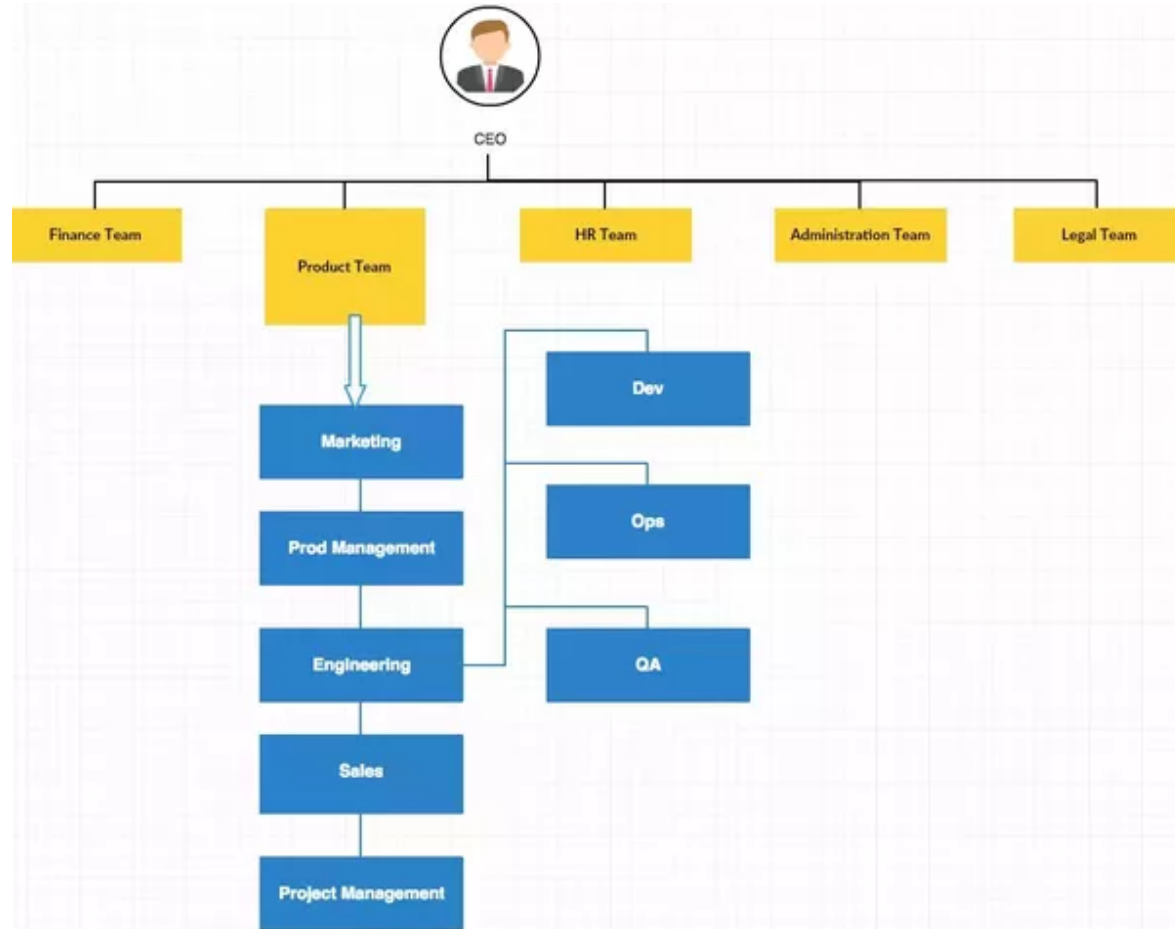

- Faster delivery of features
- More stable operating environments
- Improved communication and collaboration
- More time to innovate (rather than fix/maintain)

For details watch: <https://www.youtube.com/watch?v=o7-luYS0iSE>

The graph shows Google's growth as a steady, linear upward trend from 2012 to 2018. In contrast, DevOps shows a sharp exponential increase starting around 2016, surpassing Google's growth rate by 2018.

6. DevOps Stakeholders

7. Goals of DevOps

- Improved deployment frequency
- Faster time to market
- Lower failure rate of new releases
- Shortened lead time between fixes
- Faster mean time to recovery (in the event of a new release crashing or otherwise disabling the current system)
- Maximize predictability, efficiency, security and maintainability

8. DevOps Important Terminologies

- Agile
- DevOps
- Continuous Delivery (CD)
- Continuous Integration (CI)
- Microservices
- Release Orchestration
- Provisioning
- Configuration Management
- Deployment Management
- Test-Driven Development (TDD)
- Build Automation (BA)
- Unit Testing
- Application Release Automation (ARA)
- Canary Release
- Dark Launch
- Regression Testing

9. DevOps Perspective - Traditional

DevOps Perspective - DevOps

10. DevOps & Agile

- Product Vision
- Business Needs
- High Level Release Timelines

L3)

Envisioning

Initiation

Build and Test

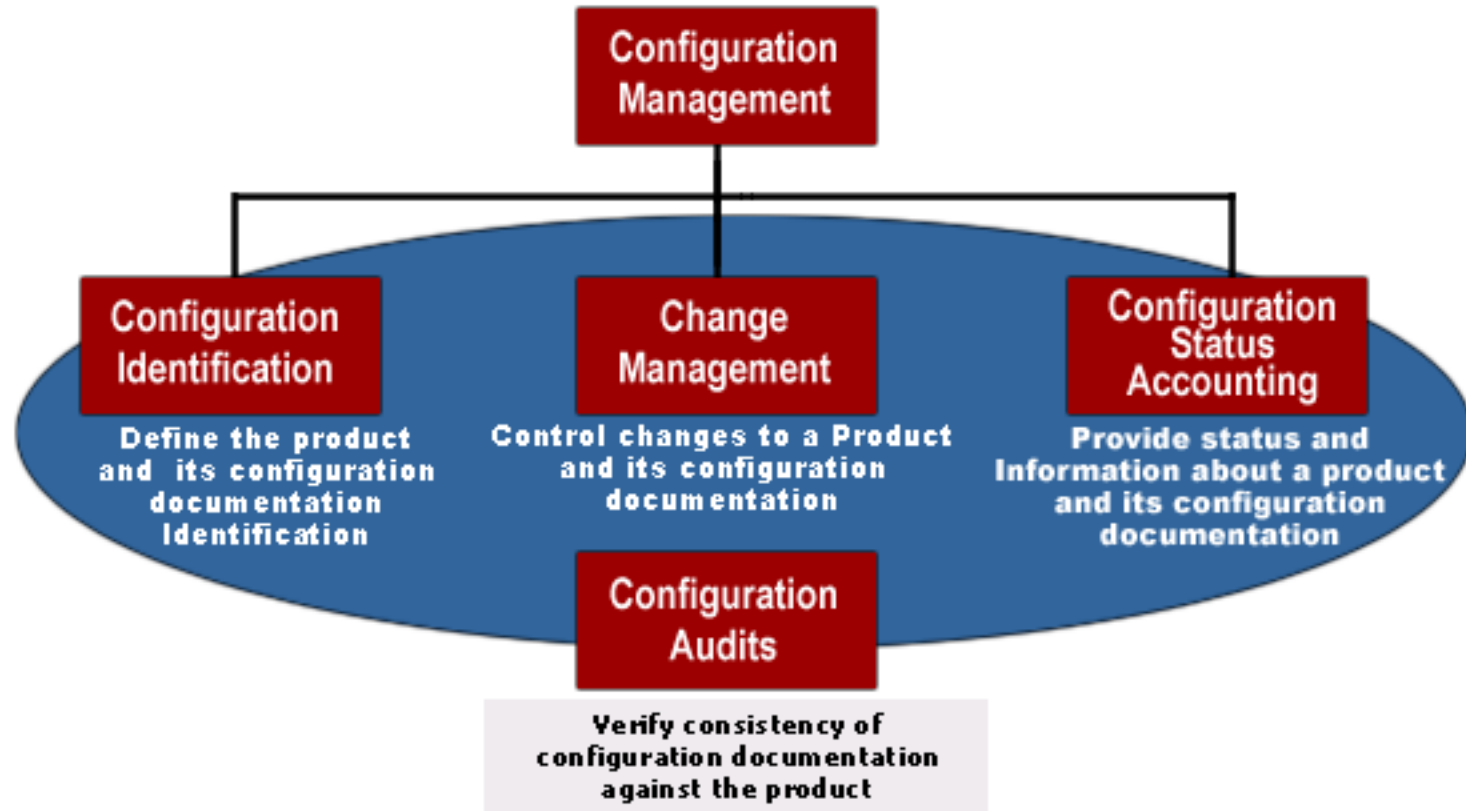

Operations

- NFRs
- Platform specific inputs
- Remote access constraints
- Business Continuity inputs
- Infra provisioning
- Security / Firewall requirements
- Back-up and Restore inputs
- Disaster Recovery inputs

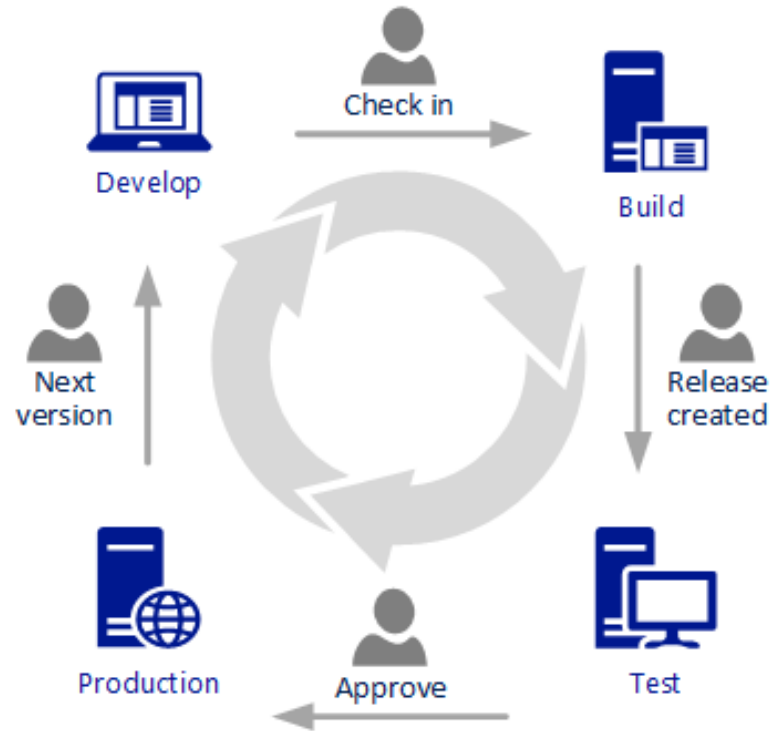

11.Modern DevOps Toolset

- **Cloud Computing**
- **Virtualization**
- **Version Control**
- **Configuration Management**
- **Monitoring**
- **Continuous Integration**
- **Containerization**

12. Configuration Management

13. Continuous Integration & Deployment (CI/CD)

13. Continuous Integration

13. Continuous Delivery

13. Continuous Delivery V/S Continuous Deployment

CONTINUOUS DELIVERY

CONTINUOUS DEPLOYMENT
